Countdown Timers

Hits: 8,436

Description: There are 3 scripts included in this package. The first countdown in minutes to zero and alerts the user / redirects. The second does the same thing but can count down hours as well. The last one contains multiple countdowns which can be setup with different times, set to start at the same or different times. This is particularly useful if you are writing an online test as you can determine the current time and what happens when the timer runs out. It is cross platform and has been tested using Opera 9, Netscape Navigator 8.1, Mozilla Firefox 1.5.0.4 and Internet Explorer 6 SP2.
