## BADGER finance

Hits: 6,683

**Description:** BADGER finance is an open source php-xampp-mysql-web-based personal financial management application. BADGER is programmed in php, stores data in mysql databases and uses AJAX for its professional user interface. It and comes with an easy to use installer for Windows. Badger is by default installed locally as a single-user single-logon application but can also be installed on a remote webserver. Badger is available in German and English.

Features:

- \* Multiple accounts
- \* Multiple currencies
- \* Freely categorizable transactions (for example: Food, Rent, Hobbies etc.)
- \* Graphical statistical analysis module (how much did I spend in what categories over which period of time?)
- \* Graphical forecasting module (How much can I spend per day if I want to have saved 1000 € by the end of the year?)
- \* Expendable CSV import module for quick import of online banking data
- \* Top-notch AJAX \* Manage as many accounts as you like in any currency
