**Description:** Expanse is a PHP/MySQL content management system designed for creative people.

What does that mean? It means no more having to create a bunch of redundant HTML pages over and over again for content that you've already written. It means being able to control your website from anywhere. It means you can stop doing the grunt work, and go back to creating. Expanse lets you upload your artwork and photos, create thumbnails, add press events and your latest news, as well as allowing people to interact with you and keep up to date on your work.

It enables you to create and manage a website without being bogged down in the details.

You're going to kick yourself in the head for all the work you used to do that Expanse now does for you.
