# LI-Countdown

Hits: 7,306

**Description:** Place an unlimited amount of countdown timers on your website with just one script. There are 2 files you need to upload. One is the script itself, the other one is a setup file in which you setup how the timer will appear on your website. If you want more countdown timers on your website with different layouts, you simply make another setup file(s). It's just a minute work. There are 5 different styles to display the timer to choose from. And finally you call up the countdown timer with a php include command and a time to countdown to, thats all. You can even set to countdown to your selected timezone.
