# CastIT

Hits: 1,733

**Description:** What is castit you ask?

Castit was originally wrote to monitor shoutcast servers on Unix, with no gui interface and was a command line driven application. Its primary and only function was to parse the xml stats and insert those stats into a mysql server. We decided that it would be great to share this application with the rest of the webcasting industry and thus the port to windows.

So what can i do with castit?

Castits most powerfull features, is the ability to insert stats into a mysql database. It is highly recomended that you use this feature. In doing so you will be able to keep track of all songs played and at what time, and how many listeners where tuned in when a cetain song was played. Put more simply it can help track what songs suck! and which ones dont! This will also help track your peak broadcasting hours.

## Resource Specifications

<b>Version:</b>	9.0
<b>Platform(s):</b>	windows
<b>Date Added:</b>	Aug 21st, 2006
<b>Last Updated:</b>	Aug 21st, 2006
