WebsiteWatcher

Hits: 1,159

Description: WebsiteWatcher allows you to monitor a specific (static) website for changes. If the page is updated, you immediately get an SMS message as notification. This tool was initially used to monitor university websites where results of exams were published. Please notice that this simple tool only works for static pages.

Resource Specifications

Version:	1.0
Platform(s):	linux, windows, freebsd, osx, sun
