Active Image Viewer

Hits: 6,248

Description: Image Viewer provides a very efficient way to display multiple images within a small area. Thumbnails are automatically generated and displayed (removing the need for you to create smaller versions of your images / pictures). When a visitor clicks a thumbnail the full size image is displayed within the current page. Each full size image may have link attached to it which can be set to either open in the current browser window or a new window.

Lightweight

The script code is contained in two very small files (less than 9kb in total!). This makes the function very fast to load and execute.

Simple to Use

Adding the Image Viewer to a page is easy with the configurator tool. Simply enter the details of your images and the tool will provide you with the code to be copied and pasted into a web page.

Resource Specifications

Version:	4.7
Platform(s):	linux, windows, freebsd, osx, sun
Date Added:	Sep 12th, 2006
Last Updated:	Sep 12th, 2006
