Simple Server Monitor

Hits: 3,680

Description: With this small php script you can track the status (on/off-line) of a server and show a picture and a text depending on its state.

Usage:

Download the zip file from the download link below and unzip it. Then open the online.php file with text editor and set the host and the port of the monitored server. If you need you can modify the on/off-line messages. Now upload all the files form the archive (the php file + the on/off-line pictures) to the web and you are all set. Call online.php and you'll see the status of the server.

Resource Specifications	
Version:	1
Platform(s):	linux, windows, freebsd
