Dreamweaver Calendar

Hits: 4,755

Description: Macromedia Dreamweaver calendar component designed for building webpages that deal with dates. Allows selection of special and restricted days. Has two different ways to appear in the webpage: showing the calendar expanded or showing combo boxes and a button to expand the calendar. It's easy to install (just a Dreamweaver extension) and easy to use. Supports four languages.

It was a hard (and time consuming) task for me inserting an advanced JavaScript calendar using Dreamweaver because it was required a lot of hand coding, finally I've found this extension, and after installed appears a new option in the Dreamweaver menu: "Insert Calendar". Now I spend only a few seconds when inserting a calendar into my web pages. Thanks.
