# Quick and Dirty E-mail Validation

Hits: 1,012

**Description:** If you use this code, you will be able to validate a submitted e-mail address. It checks for an @ character, and actually checks the DNS of the e-mail address domain to make sure it has a mail server.

## Resource Specifications

<b>Platform(s):</b>	linux, windows, freebsd, osx, sun
<b>Date Added:</b>	Sep 25th, 2006
<b>Last Updated:</b>	Sep 25th, 2006
<b>Author:</b>	RaX

**Average Visitor Rating:**  **0.00** (out of 5)  
 Number of Ratings: 0 Votes

**Average Member Rating:**  **0.00** (out of 5)  
 Number of Reviews: 0 Reviews
