TheDeleter is an extremely useful script. Version 1 has a small typo, line 439 should read: `define("_De3","Password") ;`

On hosts, scripts create directories with wrong User (Owner) permissions - 99. These cannot be manipulated through FTP and they must be CHOWNed by Root. With TheDeleter I was able to delete the previously downloaded directories and re-up them so they would have correct User permissions. Very cool. TheDeleter can delete what FTP cannot, because it's executed on the server. Thanks
