The Best PHP Code Generator For MySql Hits: 5,732

Description: PHP MySQL Wizard is a smart PHP code generator, with absolute zero knowledge of coding the wizard can generate a functional web application (which you can freely distribute) driven from your MySQL database, saving you hours of tedious programming. Using the generated application both administrator and/or users will be able to view, search, sort, edit and delete records from your MySQL Database . The wizard has many friendly and easy to use features such as: fully customizable appearance of the generated application (select or create your own style) • Set validation rule for user entries (MIN or MAX range, special character checking) • Custom error alerts • Ability to set Lookup columns (to handle foreign keys) • Advanced security options • Ability to generate unlimited number of projects, and more Try your free Non expiring demo version now to experience how easily the wizard interface can generate for you a quality work in just a few clicks.

It helped me to quickly create an admin for a MySQL DB, the support have been also incredible. It would be nice if you could make it so that you could select fields from a row and generate a php email script to send off to either yourself or a customer(I guess That would be a nice feature to add)
