Affedit Conversion Tracker

Hits: 764

Description: Affedit allows affiliates to identify converting traffic. It logs visitors, recording the page, keywords and identity of the ad (if any). Information from the log record is then inserted into the tracking or subid variable of affiliate links. This appears in the network sales report telling you exactly which keywords and ads converted. Whether you're writing content for search engines or advertising, Affedit tells you where to concentrate your time and money. Because affiliate links are discovered and changed automatically by pattern matching, no extra work is required to install Affedit on existing sites.

| Resource Specifications | |
