Advanced Website Creator

Hits: 1,615

Description: A web development environment that allows you to:

- Build easily robust applications using an MVC framework and a MySQL/PostgreSQL/SQLite database backend.
- Do all your application development inside Advanced Website Creator. No more editing arcane .xml files.
- Improve positioning of your websites in search results by using search engine friendly URLs.
- Take advantage of a database abstraction layer, that greatly simplifies database development.
- Automatically use transactions when they are available for the target database engine.
- Stop using include() and require() - library and user PHP classes are loaded automatically when used.

Advanced Website Creator integrates with most popular PHP encoders. Full source code is available for the PHP runtime framework.

Resource Specifications

Version:	2.1.0
