PHPXref

Hits: 2,841

Description: PHPXref is a Perl script to make working with the source code of a large PHP site somewhat easier. It allows you to: Cross references classes, interfaces, functions, variables, constants and database tables defined and used across your various PHP files, and generates documentation for each class & function defined in the PHP files by utilizing formatted comments placed next to each function. The output is a tree of HTML files that can be downloaded and browsed on a local machine without having to setup a web server, etc.

Very Useful if you modify other peoples PHP code, Oct 22nd, 2004

Reviewed By: Bola_King

I recently needed to make some modifications to a large (800+ page) PHP application, without having seen the code before.

This script made the task of understanding the way the code inter-related a breeze, by providing a hyperlinked cross reference to internal and standard PHP functions.
