## Flash based 'contact us' form.

Hits: 11,558

**Description:** This is a contact form made in flash and php, it can be used on 'contact us' pages. A flash file contains the form items and when the 'send' button is pressed it sends the values to mailer.php, this mailer.php sends the email to the receiver. Few of the benefits of using a flash form instead of a html contact form are: better user interface and less junk messages (automated scripts cannot send emails through a flash form unless it is decompiled). You can download the sample fla and php files for free.

if you're looking for a very simple contact form to use, this is it.

i downloaded the zip file, unpacked it, then added the .swf to my html page... and BAM! worked like a champ.

be sure to edit the mailer.php file adding your contact email.
