YourFreeBB - Free phpBB Hosting

Hits: 746

Description: Creating your own discussion forum doesn't have to be difficult or time consuming! With YourFreeBB, you can be up and running in minutes. We've built our system with speed and ease of use in mind, leveraging the power of the popular phpBB forum hosting software and turbo charging it to load fast every time. Where other companies offer "thousands" of templates that may not work or are just plain ugly, we offer dozens of high quality templates to choose from to keep your board looking professional and attractive. We've also added many useful features to keep your users happy, as well as make your life easier. RSS feeds keep your users informed of new topics so they know when to check back, and a simple Javascript feed lets you place recent topics from your forum directly on any web page you want. On the go? Use our WAP and XHTML features to read and post from your cell phone or PDA. Our short subdomain URLs are easy to remember, and our LIVE support staff is always available to help.
