## D4WStats Web Stats for Dreamweaver

Hits: 1,625

**Description:** D4WStats is an easy to install - easy to understand web traffic analysis software. D4WStats gets the traffic information through an invisible JavaScript code inserted on your pages, and register the real user visits creating a lot of useful reports designed to marketing and search engine optimization. This web stats system is packed as Dreamweaver extension allowing to be installed with a single click from the Dreamweaver menu. The requirements and server load are minimums.

### **Easy to install**, Jan 3rd, 2007

Reviewed By: peterhartmann

It's amazing such way of installing the stats system. It doesn't ask me to do anything, just a click and that's all. I have some experience with other stats systems and they usually require many steps and configuration parameters to install, but D4WStats is an exception, it's the easiest stats system I have ever tested. I would like even more if there were additional historical reports available, but anyway I consider it an excellent stats system.

### **Remove the noise of traffic generated by automatic robots**, Jan 15th, 2007

I found this software intuitive and powerful. Now I know more about my visitors without the noise of traffic generated by robots and other automatic programs; of course I'm still checking a classic log analyzer (not related to this soft) when I need to know about the search engine robots but I love the access to the users' stats separately with D4WStats. I'm also impressed about the updated IP-to-Country database; it gives me a 99% of successful country identification.
