Jeebles Directory

Hits: 19,403

Description: Jeebles Directory, open source software, uses a sleek, modern looking user interface to display all of the files in a directory, along with descriptions and download links. Also included is a powerful, protected administrative panel, which allows you to perform a wide variety of tasks. Jeebles Directory is capable of displaying information in several languages, and has translation packages available, as well as a detailed user manual (download separately, strongly recommended). Possibly best yet, Jeebles Directory's package can get as small as 40.9 kilobytes, and doesn't require installation. Just upload, and go! Jeebles Directory is based on the extremely powerful sniff core, so it has proven stability and security. Bugs are fixed quickly when (and if) found, and user requests are typically accommodated for. Images in a directory are displayed as small thumbnails, so Jeebles Directory is often even used as a gallery!

Jeebles Directory -the nicest listing script, Nov 11th, 2006

Reviewed By: geopal

I have been using Jeebles Directory script for quite a while now, developed snif. It is definitely for people who like it small and simple, yet require more functionality than just a simple directory listing. Apart from the nice design, multi language support, autothumbs one of most useful features is the Description column! As the script developed it now has the upload/delete files and add-remove-change descriptions functions in a nice admin panel. Thumbs up for Jackson Peebles and his devotion.
