kDataGrid for PHP

Hits: 945

Description: kDataGrid for PHP is a component for building advanced, highly automated data grids for your websites and applications. kDataGrid supports MySql, Postgres, Oracle and SQL Server 2005 and automatically generates data-editing pages for quick and easy data manipulation. With features such as automatic table mapping and pagination, AJAX edit-in-place and quick-search, custom column formatting, theming support, built-in template engine and many more, kDataGrid is designed to fit into any developer's toolbox.
