PHP Clean Calendar

Hits: 10,584

Description: PHP Clean Calendar is a very intuitive feature packed calendar. Are you tired of calendar scripts that are big, clunky and difficult to modify. Then this is the solution you've been looking for. PHP Clean Calendar is easy to use, easy to install and easy to modify calendar script using PHP, MySQL, and a little JavaScript. But do not worry, absolutely no programming knowledge is necessary.

This script is perfect if you would like the ability to list your event calendar online.

Features:

Calendar interface that represents which days has events

Event Name, Rich Text Description, Date, Start Time, End Time

Search Engine - by date or keyword (searches title & description)

Password protected administration module which allows you to add, edit, remove calendar events.

This script installs in minutes.

Full Documentation will walk you right through the installation process. Add-ons and support available through our forum, visit our site for more details.

After using Matt Kruse's web calendar for years our women's health site needed a modern calendar. After considerable research I found the Php Clean Calendar and used the online demo.

It did exactly what we needed - list events, have an independant search feature, and was intuitive for both users and our non-techie web editor. At \$14.95 it was a bargain for our non-profit group.

Install was easy and the developer was VERY responsive to our questions and possible mods. I'm impressed!

This is a great calendar. Easy to use, with a clear display, date-picker and search function. What set this apart for me is the superb professional service offered by AT Web Results, Inc.

Nothing is too much trouble for these guys - especially Tim and all this at a VERY reasonable price.

If you need a good calendar at a good price with super after-sales, this one is for you.

PHP Clean Calendar by AT Web Results is an amazing product; very easy to install, and even easier for me to further modify to suit my needs. They just released a new product called PHP Easy Photo Gallery and I'm going to buy that as well! Also customer service was excellent, always got immediate response to my questions. Erica Grong

I purchased this event calendar with the intension of making a couple simple modifications...

That's exactly what I did and I ended up with a beautiful event calendar!

The entire look is controlled by one style sheet and the calendar can be placed in any page, and location.

one word, (PERFECT)

PHP Clean Calendar --Great!, Jul 13th, 2007

PHP Clean Calendar is the perfect description for this calendar from ATWebresults. It was a breeze to install for my clients, has a nice clean look, was simple to customize with CSS and very functional with a date picker and event keyword search. Overall a great calendar at a great price.
