# cWhois

Hits: 2,487

**Description:** cWhois is a php function that can be used to check if a domain name is registered (or available) and also to retrieve details about the domain owner. cWhois works with over 380 domain extensions such as .com, .net, .org, .co.uk, .ro, com.hk etc. This makes it one of the most comprehensive whois utilities on the market. cWhois is simple to use and easy to incorporate into your site. Perfect for web hosting and domain name sites.
