Pieforms

Hits: 6,246

Description: Pieforms provides a simple, unified way to create, validate and process forms all with a common look and feel, with support for pluggable elements, renderers and validation rules.

In simple terms, Pieforms makes HTML form creation easy, fast, and less error prone than whatever way you're doing it currently. And the best part is, Pieforms is very powerful and customisable, and suitable for anything between simple login forms and advanced multipage surveys, and beyond!

Resource Specifications	
Version:	0.2.2
Platform(s):	linux, windows, freebsd, osx, sun
Date Added:	Nov 28th, 2006
Last Updated:	Apr 7th, 2007
