PHP Paypal Payment Processor Script

Hits: 3,101

Description: This is a easy to use, easy to set up PayPal Payment Processor. This script sets up in minutes and is highly customizable. Everything you see in the form on the demo page can be customized. The text, the error text, the text above each field. The buttons can also be customized. Use the most popular PayPal buttons, your own image, or an html button with custom text. With only two lines of code this can be embedded within any website page with a PHP extension and php installed on the server. The config.php file is fully documented to walk you right through the process. NO Programming knowledge necessary. This script will validate all info prior to submission. The buttons can be different on each form. Use this script to have invoices paid online, accept donations for your nonprofit company, or for any other reason you can think of!

Reviewed By: spectrom

This script has to be one of the easiest ways of quickly adding an online payment facility to your website. The script is simple to install and modify to suit the design of your website. Great for providing your customers with the option of paying your invoice online at your website using the secure services of Paypal.
