FLV Video Player

Hits: 3,262

Description: The Tribulant FLV Video Player v2.0 allows anyone to seamlessly and easily play any '.flv' video of any filesize and any dimension using two lines of code in a configuration file.

The '.flv' video is streamed either from a local directory on your server or from a remote server using an absolute url. The url to the '.flv' video is specified in a configuration file and from there the script will do the rest to ensure that the file is correctly streamed, resized and played as expected.

The development of this video player was aimed at usability, quality and control. While offering the user full control over the playing video considering all aspects, from video position to sound volume, the player still streams and plays the video file ('.flv') flawlessly at the highest possible level of quality.

By purchasing a single license for this FLV Video Player, you will be able to use this player as many times as you want/need on the specified domain upon ordering.

Resource Specifications
