## Custom user authentication

Hits: 4,524

**Description:** Welcome, all to the first of a series of articles to implementing your own custom user registration and authentication modules.

I strongly suggest you develop this part of your website as a module, otherwise you'll be tied to a particular implementation when you decide to make changes (and trust me - you'll make the changes!!)

### **Great Example and Tutorial, Jan 3rd, 2007**

Reviewed By: fang009

I can remember the first time I tried to create a user validation / registration form and the frustration that I had. Now going back and refreshing my memory this was exactly what I needed. Straight to the point and excellently written so that developers from novice to expert can read and implement within seconds. Great Work.
