# Site Sapiens ECMP

Hits: 1,121

**Description:** Site Sapiens 3.0 is an enterprise content management platform, which is destined, first of all, for the web-projects demanding of different information environments integration. Site Sapiens organizes data of distributed heterogeneous information networks and provides full-scale management of the data. Site Sapiens 3.0 contains own client/server SOAP API for collaboration with external resources. Data management interfaces of Site Sapiens have desktop applications features thanks to the embedded AJAX Framework, including such solutions as dynamic trees, grids, explorers etc. The architecture of Site Sapiens is designed for project needing high performance. Applications Site Sapiens 3.0 are web-services and they can be allocated with various servers for load balancing.

I use Site Sapiens as a content manager and I have really liked it. I was surprised how it's easy to use when I only begun to familiarize myself with the system. I'm used to work with MS Windows File Manager, I'm accustomed to work with drag&drop. I have these features for content management now. So I appreciate that I can do my work quickly, easy and by a habitual way.
