MasterRecommend

Hits: 2,569

Description: MasterRecommend is an easy to install, easy to maintain CGI program for your visitors to recommend your website to their friends or associates. It is coded to minimize intentional and unintentional misuse, including spamming/blasting. The outgoing emails are formatted via simple templates kept in a separate file for quick and easy changes. Optional fields are a text area for personal messages from your visitor to the person whom your website is being recommended to and a checkbox for your visitor to request a copy of the mail being sent to her/his friend or associate. MasterRecommend also does a rudimentary check for obscenity and possibly offensive slurs and refuses to mail such to any but the webpage maintainer.

I've been using MasterRecommend for a few years and have recommended it to friends who use it too. There are many ways to set this up on your site depending on your needs and the manual covers this in detail. I thoroughly recommended this to you, so try it out and you'll be glad you did.
