## Profanity Filter - WebPurify

Hits: 774

**Description:** The WebPurify profanity filter web service has become the industry standard for profanity filtering. This powerful and effective filter can be easily integrated into any web application using REST. Developers no longer have to build profanity filters from scratch, wasting costly hours amassing and maintaining a comprehensive list of profane language. The basic reusable scripts on the internet are flawed, ineffective, and quickly outdated. With WebPurify, the profanity list updates automatically to maximize accuracy. In addition to scanning for profanity, WebPurify allows the user to add their personal list of words to filter. Add WebPurify to you application or download the WordPress plugin or Drupal CMS Module.

### Resource Specifications
