PHP Form to e-Mail

Hits: 13,159

Description: PHP Form to e-Mail is a do-it-all HTML / PHP Form Management solution developed with simplicity in mind. No longer do you need to create a separate HTML / PHP form file and integrate it with a processing script. Our powerful administration back-end allows you to create your form fields / questions, data logging, 3 optional outgoing e-mails, customizable preview and completed pages. Customize one template and create as many unique forms as you wish. Key features include customizable template(s) to match your site design, administration, recipient and third party e-mails, file uploading, file attachments, required fields, multiple page support, MySQL / CSV data logging, field syntax checking and much more! 4 layers of security to protect your forms (Captcha, Quickly Ban IP Addresses, no e-mails in page source & preview page not allowing single click forms spam-bots abuse).

This script has really helped me out. I've tried several different scripts which claim to be "easy" for non-programmers. This one actually is!

A very flexible and intuitive interface which enables an easy build of the form. I mostly build Joomla sites and it was easy to integrate, using a wrapper.

Regardless of the quality of a Programm, for me it stands or falls based on the support. And in this area, I've never met better! Whatever the problem, They help until it's solved - and fast! Get it!

I evaluated many form scripts for 2 weeks. Some were attractive but not secure. This script seems to me to be the most secure with a clean, uncluttered interface. The level of personal support Jason gave blew me away. My question about installation was answered very quickly. Jason listened to my issues. Even when some of my questions were dumb, he answered them with respect. You cannot find a more secure forms script. You'd be hard pressed to find better support.
