# Get metadata on MySQL databases

Hits: 599

**Description:** Getting information about databases is essential if you want to write generic and scalable applications. This code shows you how to get information such as all databases on the server, all tables in each database and all field and field info for each table. Even if you do not need to build on this code, you might want to copy the code which prints out all databases, tables and field information plus examples. It's a great way to get an overview of the tables you are working on for a project.

## Resource Specifications

<b>Platform(s):</b>	linux, windows, freebsd, osx, sun
<b>Date Added:</b>	Jan 25th, 2007
<b>Last Updated:</b>	Jan 25th, 2007
<b>Author:</b>	IT-GURU

**Average Visitor Rating:**  **0.00** (out of 5)

Number of Ratings: 0 Votes

**Average Member Rating:**  **0.00** (out of 5)

Number of Reviews: 0 Reviews
