Active Page Generator (APGen)

Hits: 1,912

Description: Active Page Generator (APGen™) is the leading programming environment for generating static and more static web pages. APGen lets developers use VBScript, JScript (and optionally PerlScript and Python), and COM to generate HTML, XML, ASP, JSP, and other file formats. APGen was designed to leverage ASP programming skills and tools while providing a new solution for content generation. APGen extends the functionality of dynamic web page technology by enabling content generation independent of HTTP requests. Benefits include: 5x to 90x faster web sites (gains in scalability and response speed), Programmable web site creation and maintenance, More reliable web sites, and Compatibility with caching products.

Resource Specifications

Version:	1.0
Platform(s):	Win NT/2000
