Dreamweaver Form Validator

Hits: 4,254

Description: Form Validator gives designers and programmers working with Adobe Dreamweaver a very powerful form validator. This tool supports validation for required fields, integer/float numbers, positive numbers, ranges, string lengths, zip codes, email, checked boxes, compare fields (example for password confirmation), credit card syntax, and more. This validator also accepts regular expressions, useful for custom field validations. There are not programming or hand coding skills required, you can create the validation rules from a visual interface accessible from the Dreamweaver commands menu. The Javascript generated code is compatible with all actual browsers. You can validate multiple forms on the same page by using this form validator.

Nice Dreamweaver integration, Apr 11th, 2007

Reviewed By: `davidezquivel`

I found this tool easier than other form validators due to its full Dreamweaver integration, accepting templates without additional changes, no problems with locked areas, easy to modify after inserted all the time from the Dreamweaver visual interface without a piece of hand coding required.
