Building "drag and drop" shopping cart with Ajax Hits: 2,855

Description: For this article, we'll create an interactive shopping experience allowing us to add items to our shopping basket by dragging and dropping them onto an icon of a shopping cart. We'll add AJAX functionality, allowing us to update our shopping cart without redrawing the entire screen. To save the trouble of setting up a product database, we'll use Amazon Web Services to search for DVDs and use those to shop from.
