TrioLive - Live Chat Solution - Customer Support, Sales, & more. Hits: 2,129

Description: Web-based live chat solution for sales, support, and internal communication. Easily integrate chat into your website through text links, graphic buttons, popups, or flash animations. Monitor site traffic in real time and offer assistance to specific visitors, or have the software invite people automatically after a set period of time. TrioLive provides chat operators a choice between a clean, intuitive AJAX web interface or a powerful Windows application that integrates into your computer's operating system. Chat operators can view location and browser information for visitors in chat, and can monitor their browsing as it happens. Push users to specific web pages, send and receive files, and transfer chats between operators. TrioLive is available as a ready to use hosted solution, or as an installable PHP/MySQL software package.

Resource Specifications
