Lightweight Flat File Unique Hit Counter - Hits: 1,440 Easy to use!

Description: This script is designed to be as lightweight as possible whilst also maintaining power and functionality. It can be effectively used with 3 lines of code and can report a variety of user details including IP Address, browser info, last visit time etc.

Perhaps the most useful feature is that it can provide UNIQUE HITS and also page refreshes for each user. This script requires NO MySQL databases as it uses a flat XML file for storing information.

Resource Specifications	
Version:	1.0
