DbBrowser : A free datagrid

Hits: 995

Description: How many time have you wrote the same Perl code to display databases records in a datagrid style ? DbBrowser is a Perl module that can help you to stop writing the same thing all your life. DbBrowser module simply need a sql query, DBI and CGI handles and that's enough to get a fully working paginated web datagrid featuring multi columns sort, data export and user defined filtering criteria.
