# DB Manager

Hits: 2,664

**Description:** Do all the things you can to a normal database ONLINE, update your entire database without having to have microsoft access or download anything.(access is required to create the database first and upload it).Simple and Easy to use, no coding knowledge required. The db manager is a Microsoft Access driven system. This means that this db manager works by going through a Microsoft Access Database. This db manager comes with great features such as being able to add new records to databse, editing existing records that are currently on the databse, deleteing multiple records that are currently on database, and also being able to view all records on database with paging. The two best things about this db manager is that 1. you can add,edit,delete, and view records all online on a web page. 2. all scripts are fully customizable.
