Guestbook

Hits: 1,815

Description: The guestbook is a Microsoft Access driven system. This means that this guestbook works by going through a Microsoft Access Database. This guestbook is great for using on websites. For example to get the best way of displaying your visitors feedback, you can use these scripts, and allow your visitors to add their own feedback of your website, which will be shown to everyone that goes on the page. The guestbook comes with great features such as allowing visitors to view the feedback from others with paging, which the number of records displayed per page can be changed, also has another feature for your visitors to be able to add their own comment.

Resource Specifications
