Printable Document Generation with PHP Hits: 650

Description: This article focuses on the document that can be generated using PHP namely Rich Text Format (RTF). Rich Text Format (RTF) is a file type used to transfer formatted text documents between applications, even those that run on different platforms, such as IBM and Macintosh. RTF is a file format that many word processing programs understand; it is often used when a document is created in one word processing program but is expected to be edited in another word processing program.
