# Simple Javascript Multi-User login

Hits: 4,199

**Description:** This JavaScript will controll access to any pages you specify. Within this script you can configure any amount of username and password aswell as the page the user is directed to on success and the page the user is sent to if they fail. Employing this script is incredibly simple: just copy the code into the head of your document and the login form into the body of your page. Then it's just the matter of configuring login combinations, success and failiure pages and that's it done. This script is simple, running on a single multi-dimensional array of usernames and passwords. Installation normally takes about 4 minutes.
