dirLIST - PHP Directory Lister

Hits: 3,808

Description: This PHP script will list all the files and folders in a given directory. It has the ability to calculate folder sizes (not usually found in these types of scripts) and can be customized by the user. Works on BOTH Windows and Unix, Very simple to setup!

Some of dirLIST's key features:

- * List all the files and folders in a given directory
- * Show the sizes of folders and files
- * Ability to exclude specific files and folders
- * Ability to exclude files with certain extensions
- * Works on both UNIX and Windows systems
- * Statistics including total files and folders and page load time
- * Alternating row colors
- * User customizable
- * Security measures to prevent parent directory listing and more
- * Cross browser support
