# PEAR::DB replacement

Hits: 224

**Description:** As the title says. It mimicks the PEAR::DB API, with a few (~3) very useful added functions: reset() for resetting a result set back to the first row, seek() for moving to a specific point in the result set and an SQL debugger which makes it much easier to see what queries are being performed.

## Resource Specifications

<b>Version:</b>	1.0.2
<b>Platform(s):</b>	linux, windows, freebsd, osx, sun
<b>Date Added:</b>	Jun 21st, 2007
<b>Last Updated:</b>	Jun 21st, 2007
<b>Author:</b>	Richard Heyes
