Geographical Information of your Website Visitors

Hits: 1,240

Description: This script is a tool to determine geographical and other information about your Internet visitors in real-time (based in GeoIPCity.dat Database) When a person visits your website, GeoIP Database can determine which country, region, city, the visitor is coming from. Furthermore, GeoIP can provide information such as longitude/latitude, information used to generate a map of the city-area where your visitor come from using Google Maps Api .

There are two areas:

Public area with the last 10 visits (showing country,city and the country flag)

An Admin area to view the country,city,region,ip,time,page where your visitor come from,what pages of your site is visiting the guest and how many times.Also you can delete the visit with a simple click.

The size of the Database is over 28 MB .

Resource Specifications
