Diligint - See Where Your Visitors Are Looking

Hits: 269

Description: Diligint is a script that allows website owners and online marketers to visually see where their visitors are looking. Each visitor to your site will be tracked as they scroll up and down your sales page. Where your traffic goes and how long they spend at any particular spot is recorded, compiled and displayed in an easy to read heatmap overlay. Statistics on how long your visitors stay or read a particular section and how far down your visitors scroll are also given to help you better understand how visitors are reacting to your site.

Resource Specifications

Version:	1.0
