Generating XML files from SQL Database

Hits: 917

Description: Before you continue to write your own aspx file, check your directory write permission. I have used Northwind sample database. We will write some of data from Employees table to XML file.

I am new at ASP.net, have Visual Web Developer 2005 Express Edition, and needed to understand how to write an XML file from an SQL database. Within 3 minutes, I have copied the script into a test page, altered the Server= connection string to that given by the Database Explorer, and this script worked the first time! Thank you!
