Allodia Site Engine

Hits: 4,010

Description: First and foremost, Allodia Site Engine is a Content Management System (CMS). It is the engine behind your website that simplifies the creation, management, and sharing of content. Use Allodia Site Engine as CMS, blog, site of news or personal page. The Allodia Software Team focuses on building a solid application framework rather than on add-ons that are typically found in many portal solutions.

- Database on text files - you not needed MySQL
- Division an article (news, marks) on categories
- A large and healthy user and developer community
- Provides a basic level of content approval for registered users
- Page caching mechanism to improve performance on busy sites
- Search engine steady-state (.html) URL's
- Internationalisation (interface translation)
- Advanced and separate system administration system.
- Conclusion on panel a menu last 10 search requests
- Site map
- Guestbook
- Search engine
- History of search
- Commentary
- Tape of news
- Statistics
- RSS
