vSig: Free Dynamic Signatures

Hits: 724

Description: Instead of being restrained by traditional forum signature services, unleash your true creative side.

Includes:

- Statuses of all major IMs (MSN/WL, AIM, Y!, Jabber/GT, ICQ)
- Whatpulse statistics
- IP/Browser/OS/etc. detection
- Counters
- Daily and Random Quotes
- Last.fm support
- RSS/Atom feed syndication

Not only that, but you can achieve much more by built-in scripting: a PHP-like language allows you to just about do anything with your signature, whether expanding features, displaying random pictures, the date, whatever. Also made possible by vScript:

- Twitter
- XFire
- Excerpts from your website, your own interface, etc.

Upload custom backgrounds and fonts! Or, ask for one at the community or use a pre-uploaded one.

All of this, along with a truly drag-and-drop editor in your browser powered by AJAX (no flash/java) makes managing everything simple. Or, for power users, vSig offers an XML editor that allows you to edit your signature to the pixel.

vSig--a revolutionary signature!
