Nitobi Spotlight

Hits: 910

Description: Nitobi Spotlight is an Ajax-powered JavaScript component for creating guided tours of web applications. Use Nitobi Spotlight to create and customize your web application tours with minimal effort: visually highlight parts of a webpage; provide a guided tour for a user; and mimic user interactions. Spotlight uses the Nitobi Callout component to provide stylish talk bubbles for instruction or commentary during the tour.

Features include:

- * Native support for Java, PHP and Classic ASP, and Coldfusion
- * Cross browser support, including E6+, Firefox, Mozilla 1.3+, Camino, and Netscape 7+, and Safari
- * Uses JavaScript to create callouts, mouse movements, and execute custom JavaScript
- * Generates simulated mouse movements and clicks
- * Can be easily skinned

Nitobi Spotlight is available as part of the Nitobi Complete UI suite, <http://www.nitobi.com/products/completeui/>
