Free SSL (HTTPS) secure image hosting Hits: 1,030

Description: Many payment processors like PayPal, eBay, Authorize.net, 2CheckOut, Nochex etc. let you show your logo on the checkout page. Unless your logo is hosted with SSL (https), it will generate an ugly security warning for buyers using IE, which will scare most of them away. Costs and effort involved in buying and installing an SSL certificate for just showing your logo is simply a waste. SSLpic provides GeoTrust secured logo hosting for FREE.

- No fee ever
- No need to create an account
- Upload unlimited number of logos
- See your conversion tracking by seeing where your logo is being used and when.

Resource Specifications

Version:	1.0
Platform(s):	linux, windows, freebsd, osx, sun
